Gravitational Field

⇒ Universal Gravitational Constant

$$F = \frac{G m_1 m_2}{r^2} \Longrightarrow G = \frac{F r^2}{m_1 m_2}$$

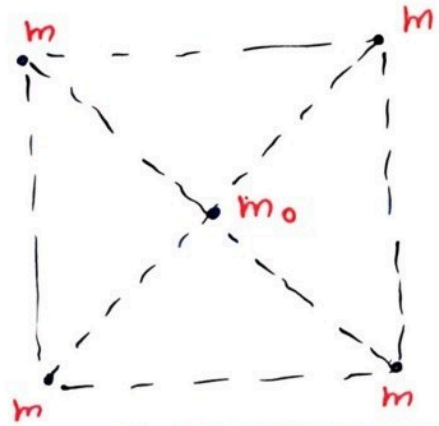
Unit (G) → $kg^{-1} m^3 s^{-2}$

Dimensions [G] → $M^{-1} L^3 T^{-2}$

⇒ Special Points

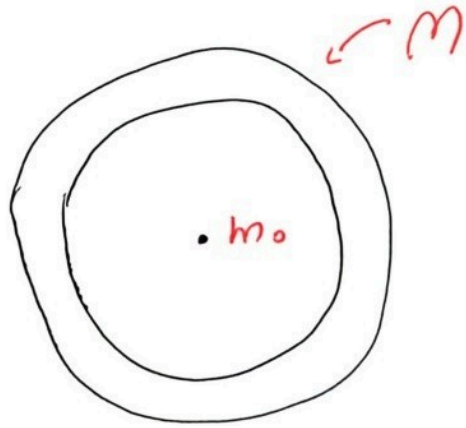
→ Neutralizing Gravitational force.

(1)



Gravitational force on "m_0" = 0N

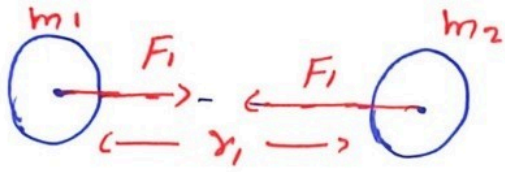
(2)

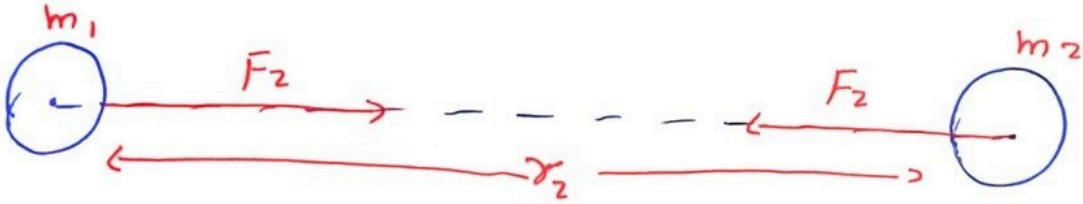


Gravitational force on "m_0" = 0

AIScanner

→ Simplified derivation method,





$$\boxed{F_1 r_1^2 = F_2 r_2^2}$$
